# PSC 587/PEC 582: Structural Modeling and Estimation

Room: Harkness 329 (Fenno Room) Days and Time: MW, 10:00-12:00

Instructor: Sergio Montero Office: Harkness 320 (by appointment) Email: smontero@rochester.edu

**Course Description:** Structural models enable social scientists to conduct rich analyses of how institutions and public policy shape individual or collective decision-making. The structural approach to empirical research is particularly useful in settings where more traditional methods cannot be applied, such as when agents behave strategically or when we wish to predict the consequences of never-before-observed policy interventions. This course covers the fundamentals of structural modeling and estimation. Depending on student interest, applications from economics, marketing, and political science will be considered, but emphasis will be placed on the methodology with the aim of helping students expand their research toolkit.

**Prerequisites:** Students are expected to have taken PSC 404, 405, 407, and 408, or equivalent graduate courses in another department. While PSC 584 is not required, students unfamiliar with games of incomplete information should be prepared to learn the material on their own if necessary for any of the readings. This course complements PSC 585 with a focus on "static" models.

**Computing:** Structural models rarely admit estimation using canned routines in popular statistical software (e.g., SPSS, Stata). Familiarity with a programming language (e.g.,

Matlab, Python, R) is therefore indispensable for structural estimation. Students should be prepared to acquire the necessary programming skills for the course.

#### Grading:

- Class participation
- Replication (due by 5/3) and presentation of a paper from the reading list
- Presentation of a research proposal (20 minutes), accompanied by a written paper outline (due on 5/3)

**Reading List:** Below is a preliminary list of topics and readings for the course. We will cover the first three topics in detail as they showcase most of the key ideas and techniques underpinning the rest of the material. We may skip other topics/readings or add new ones in accordance with student interest and time constraints. (Examples of additional topics we could cover include auctions, matching, and networks, as well as applications in finance/marketing. Dynamic models will be covered next fall in PSC 585.)
