Course Information:
Fall 2013
Tues/Thursday 11:05–12:20
Dewey 2110D

This course examines the development of warfare and growth of the state. In particular, we examine the phenomenon of war in its broader socio-economic context between the emergence of the modern nation-state and the end of World War II. Students are required to do all the reading. Student are required to make a group presentation in class on the readings for one class (25% of the grade), and there will be one big final (75%).

Course Requirements
Participation and a presentation in the seminar comprises 25% of your grade. A final exam counts for 75%. The final exam is given during the period scheduled by the University. In particular instances, students may substitute a serious research paper for the final. Students interested in the research paper option should approach me no later than one week after the mid-term.

Academic Integrity
Be familiar with the University’s policies on academic integrity and disciplinary action (http://www.rochester.edu/living/urhere/handbook/discipline2.html#XII). Violators of University regulations on academic integrity will be dealt with severely, which means that your grade will suffer, and I will forward your case to the Chair of the College Board on Academic Honesty.

The World Wide Web
A number of websites will prove useful:

Texts

I may make some minor tweaks in the syllabus during the semester, but the course largely builds on the following books which should be available in the bookstore or—cheaper—at Amazon.com. Since this is a long list, I list in bold books that you definitely should get.

War with Japan

“Death of the Ball Turret Gunner”

From my mother's sleep I fell into the State,
And I hunched in its belly till my wet fur froze.
Six miles from earth, loosed from its dream of life,
I woke to black flak and the nightmare fighters.
When I died they washed me out of the turret with a hose.

Questions to consider in formulating and evaluating social science research

1. What is the central question?
   - Why is it important (theoretically, substantively)?
   - What is being explained (what is the dependent variable and how does it vary)?
   - How does this phenomenon present a puzzle?

2. What is the central answer?
   - What is doing the explaining (what are the independent variables and how do they vary)?
   - What are the hypotheses, i.e., what is the relationship between independent and dependent variables, what kind of change in the independent variable causes what kind of change in the dependent variable?
   - What are the causal mechanisms, i.e., why are the independent and dependent variables so related?
   - How do the independent variables relate to each other?
   - What assumptions does your theory make?
   - Is the theory falsifiable in concept?
   - What does this explanation add to our understanding of the question?

3. What are the possible alternative explanations?
   - What assumptions are you making about the direction of causality?
   - What other explanations might there be for the phenomenon of study, and to what degree do they conflict with the central answer?
   - Could the hypothesized relationships have occurred by chance?

4. Why are the possible alternative explanations wrong?
   - What is the logical structure of the alternative explanations (compare 2)?
   - What is the empirical evidence?

5. What is the relationship between the theory and the evidence?
   - What does the research design allow to vary, i.e., in this design are the explanations variables or constants?
   - What does your research design hold constant, i.e., does it help to rule out the alternative competing explanations?
   - How are the theoretical constructs represented empirically, i.e., how do you know it when you see it (measurement)?

6. How do the empirical conclusions relate to the theory?
   - How confident are you about the theory in light of the evidence?
   - How widely do the conclusions generalize, i.e., what might be the limitations of the study?
   - What does the provisionally accepted or revised theory say about questions of broader importance?
