Current Research

Monographs are indicated with $\mathcal{M}$. Edited volumes are indicated with $\mathcal{E}$.

$\mathcal{M}$ **In progress.** Ash Asudeh, Paul Melchin, and Daniel Siddiqi; with Oleg Belyaev, Bronwyn Bjorkman, Tina Bögel, and Michael Everdell. *Constraint-Based Morphosyntax: The LRFG Approach.*
Target publisher: Cambridge University Press.

Importance: This volume introduces the framework of Lexical-Realizational Functional Grammar (L_RFG), which is a novel theoretical framework that incorporates the realizational, morpheme-based approach to word-formation of Distributed Morphology (DM) into the declarative, modular framework of LFG. L_RFG differs from standard LFG in that terminal nodes of c-structure are not words, but are bundles of features that are realized in a separate, linearized v-structure. L_RFG is also distinct from standard DM in eschewing derivational operations and null elements. The result is an entirely constraint-based theory of morphosyntax. The volume lays out the theory and presents detailed analyses of Ojibwe (Algonquian), O'dam (Uto-Aztecan), and Archi (Daghestanian). It also addresses certain recalcitrant phenomena in Breton & Ingush (root doubling) and Ossetic (nominal inflection).

Progress: The proposal for this volume was submitted in to Cambridge University Press in January, 2021, and is currently under review.

$\mathcal{M}$ **Planned.** Ash Asudeh. *Flexible Composition.* Target publisher: MIT Press.

Importance: This draws together several threads of my work of the last fifteen years in a new formal theory of how linguistic meaning is computed. The theory will create new bridges between distinct schools of thought in linguistic theory as well as strong interdisciplinary ties to Philosophy and Computer Science.

$\mathcal{M}$ **Planned.** Ash Asudeh. *The Language of Perception.* Target publisher: Oxford University Press.

Importance: Perception has been of key interest in Cognitive Science and its antecedents (Philosophy, Psychology), but has received relatively little attention in formal linguistic theory. This monograph seeks to at least partially remedy this, building on my previous work of the last ten years.
